Research Interests

• Knowledge-Guided Machine Learning • Vision-Language Models • Generative AI • Graph Neural Networks • AI for Science • Explainable AI • Semantic Segmentation Models • Self-Supervised Learning

Education

Virginia Tech **November 2024 (Expected)**
PhD, Computer Science Blacksburg, USA

Thesis: Knowledge-guided Machine Learning for Prediction and Segmentation Problems Involving Images.

Advisor: Dr. Anuj Karpatne

Virginia Tech **Dec 2022**
Master of Science, Computer Science, GPA: 4.0/4.0 Blacksburg, USA

Bangladesh University of Engineering and Technology (BUET) **March 2016**
Bachelor of Science and Engineering, Computer Science, GPA: 3.86/4.0 Dhaka, Bangladesh

Research Experience

Amazon.com **Bellevue, WA**
Applied Scientist Intern, *Advisor: Dr. Badrinath Srinivas* May 2022 – Aug 2022

- Developed a real-time delivery image ranking algorithm to help Amazon drivers improve package delivery. The algorithm utilizes object-detection models along with statistical methods that yield 70% improvement over prior baselines.

Qualcomm Inc **Santa Clara, CA**
Machine Learning Engineer Intern, *Advisor: Dr. Will Morrison* June 2021 – Aug 2021

- Collaborated with the GNSS Location team on GPS-based position estimation problem. This project involves improving the performance of state-of-the-art Graph Neural Network (GNN) models on satellite-based position estimations.

Virginia Tech **Blacksburg, VA**
Graduate Research Assistant, *Advisor: Dr. Anuj Karpatne* May 2019 – Present

- Enhanced the performance of large **vision language models (VLMs)** for discovering biological traits through **prompting, in-context learning, and instruction tuning** that leverages the scientific knowledge. Additionally, designed a multitask benchmark VQA dataset for scientific tasks on organismal images. See publication **C1, C7, W1**. (*Publications at NeurIPS 2024, AAAI 2024*)
- Developed a hierarchical prototype network to **discover evolutionary traits** directly from images as **prototypes**. Additionally, collaborated on accelerating trait discovery using **conditional diffusion models with phylogenetic knowledge** in the form of hierarchical embeddings. See publication **C2, C3, W2**. (*Publications at NeurIPS 2024, ECCV 2024*)
- Structured a thorough comparative analysis of **Weakly Supervised Semantic Segmentation** approaches, highlighting the superiority of saliency maps over class activation maps (CAMs) through novel evaluation metrics and introducing stochastic aggregation via random cropping to enhance saliency effectiveness. See publication **C8**.
- Developed Distance-aware Negative Sampling (DNS) for enhanced graph representation learning, optimizing cohesion and separation by considering node-pair distances, improving structural similarity in **Unsupervised Graph Representation Learning (GRL) project**. See publication **C6, W8**. (*Publications at SDM 2021, PIML 2020*)
- Innovated PID-GAN architecture merging physics insights into GAN training for robust uncertainty quantification and effective use of unlabeled data, advancing the **Physics Informed Discriminator (PID) Framework**. See publication **C5, W4, W7**. (*Publications at KDD 2021, NeurIPS 2020, AAAI 2021*)
- Implemented a **single-stage structured pruning** algorithm DAM that can enforce L_0 sparsity. It achieves state-of-the-art performance not only on structured pruning for image classification tasks but also on dimensionality reduction and graph representation learning tasks. See publication **C4**. (*Publications at NeurIPS 2021*)

Academic Services, Honors & Awards

Reviewer: NeurIPS (2024), Dataset and Benchmark track NeurIPS (2024), ML4PS NeurIPS(2021-present), SGAI-AAAI (2021, 2022), PKDD (2023), KDD (2021, 2022).

PC Member: SGAI-AAAI (2021, 2022).

Session Chair: Spatiotemporal Data at SDM 2021.

Fellowship: Kafura Graduate Fellowship, Virginia Tech, 2023.

Award: SDM Doctoral Student Travel Award (2020), Dean’s List Award (BUET 2011-16).

Technical Skills

Python, C++, Java, PyTorch, Tensorflow, SageMaker, S2, S3, EC2, Deepspeed, LoRA.
